## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 111-117 and 120-163 are rejected under 35 U.S.C. 102(e) as being anticipated by Lou (6,235,579). The reference to Lou teaches the structural features of the claimed invention. For example, as shown in FIG. 2F, Lou shows a metal-polysilicon contact having a polysilicon layer (214), a barrier layer (216) formed over the polysilicon layer, a conductive layer (218a) formed over the barrier layer, and a silicon nitride layer (210a) which is capable of absorbing oxygen, and is formed adjacent to the conductive layer, as claimed.

In addition, Lou teaches the same materials for the contact structure, including use of a platinum conductive layer and a nitride barrier layer. Lou also meets the limitations of an oxygen absorbing member comprised of multiple layers with intervening conductive layers, for example, if one considers dielectric layer (224) as an additional oxygen absorbing layer, in conjunction with metal spacer (222) and oxygen absorbing layer (210a).

Lou also teaches that this capacitor structure may be used in memory devices, and that dielectric layer (224) may be formed of tantalum oxide which meets the requirement that the layer be at least partially oxidized.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 118 and 119 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lou. The dimensions claimed, while not specifically recited, are close to those used in Lou, and would be within the scope of this reference and obvious to those skilled in the art.
